

CS 70, Summer 2014 — Homework 3 Reflection

Harsimran (Sammy) Sidhu, SID 23796591

July 19, 2014

In Problem 1, I used a different version of repeated squaring which yielded the same answer. It looks like the one in the solutions would be faster.

In 2, I used *egcd* as normal *gcd* and then went backwards. My answer was still the same however.

In 4, I didn't prove the amount of operations it takes for 4c and 4d. I thought it would be obvious... But I still came up with the same answers.
